The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic

Disclosure; Page 1578; 1580pp; English.

Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample.

Detecting vanA and/or vanB nucleic acid molecules in a sample, usefue.g. identifying vancomycin-resistant enterococcus, comprises using and/or vanB-specific oligonucleotide probes or primers.

useful for using vanA-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal and CC parasitical species, genus, family and group. A nucleic acid (1) obtained CC using the method of the invention can be used for the universal detection CC of any bacterium, fungus or parasite in a sample and for the detection of CC at least one antimicrobial agent resistance gene or at least one toxin CC gene. hexA nucleic acids are used for the specific and ubiquitous CC used to design a therapeutic agent which is effective against CC used to design a therapeutic agent which is effective against CC unicroorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., CC Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, CC which can be detected include Abiotrophia adiacens, Bordetella sp., CC Corynebacteriaceae family, Pseudomonads group, Escherichia coli, CC which can be detected include Abiotrophia based tests provides faster CC results than substrate specificity tests as results can be determined in CC an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

sequestered. Both methods are able to restore antibiotic susceptibility in glycopeptide resistant enterococci. The methods of the invention are useful for reducing vancomycin resistance in a vancomycin resistant organism, particularly Enterococcus faecium and Enterococcus faecalis, but also in other Gram-positive bacteria such as Staphylococcus sp. and Streptococcus sp., to which Enterococcus faecium and Enterococcus faecalis have the potential to transfer resistance determinants. The antisense molecules are useful in the treatment of infection and
                                                                             as intensive care units, haemodialysis units, and chronic care facilities; for the in vivo clearance of vancomycin- resistant enterococci from colonised gastrointestinal or genitourinary tracts of animals, including humans; and in primary or adjuvant therapy for vancomycin-resistant enterococcal infections. The gene based strategy targets key vancomycin resistance determinants and results in restoration of vancomycin susceptibility in previously glycopeptide- resistant enterococci. Sequences AAF67036-AAF67042 represent genes of the Enterococcus faecium vana cene cluster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            particularly preferred for this purpose. The second method involves providing additional vanH promoter sequences which are not operatively coupled to a vancomycin resistance gene, so that the phosphorylated vank
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to methods of reducing vancomycin resistance in vancomycin-resistant organism. One method involves introducing a vancomycin-resistance gene antisense nucleic acid into the organism; antisense oligonucleotides complementary to AAF76023-AAF76031 are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gene product (which

CC and/or primers are derived. The method comprises amplifying the nucleic
CC acids of determined algal, archaeal, bacterial, fungal and parasitical
CC species with a combination of defined primer pairs. The method can be
CC used for producing probes and/or primers for detecting one or more
CC related microorganisms e.g. algae, archaea, bacteria, fungi and
CC parasitical species, genus, family and for specific and ubiquitous
CC detection and identification of an algal, archaeal, bacterial, fungi and
CC using the method of the invention can be used for the universal detection
CC of any bacterium, fungus or parasite in a sample and for the detection
CC detection and for identification of Streptococcus pneumoniae. (I) obtained
CC gene. hexa nucleic acids are used for the specific and ubiquitous
CC detection and for identification of Streptococcus pneumoniae. (I) can be
CC using the method of the invention can be used for the galanst
CC microorganisms. Microbial species or genus or family or phylum or group
CC which can be detected include Abiotrophia adiacens, Bordetella sp.,
CC corynabacterium sp., Enterobacteriaceae group, Escherichia coli,
CC corynabacterium sp., Enterobacteriaceae group, Streptococcus sp., Neisseria
CC genules than substrate specificity tests as results can be determined in
CC an hour and improved accuracy is also achieved. Abi00100 to Abi002304
CC represent nucleotide sequences and primers/probes which are given in the
CC corynabacteriaceae family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and can be used for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained CC using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin certain species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., CC orynebacterium sp., Enterobacteriaceae group, Escherichia coli, Consubacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria con results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nuclectide sequences and primers/probes which are given in the companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ঠ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for generating a repertory of concleic acids of tuf, fus, atpb and/or recA genes from which probes conditions of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more crelated microorganisms e.g. algae, archaea, bacteria, fungi and congrassitical species, for universal detection and for specific and ubiquitous conference of the method of the invention can be used for the universal detection and consistical species, genus, family and group. A nucleic acid (I) obtained conference of any bacteriam, fungis or parasitie in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin conference of the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one toxin conference of the detection and for identification of Streptococcus pneumoniae. (I) can be considered to design a therapeutic agent which is effective against conference of microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., conference family, Pseudomonads group, Escherichia coli, conference family co

The present invention describes a method for generating a repertory of concleic acids of tuf, fus, atpD and/or recA genes from which probes conditions are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more created microorganisms e.g. algae, archaea, bacteria, fungi and comparasitical species, for universal detection and for specific and ubiquitous comparasitical species, genus, family and group. A nucleic acid (I) obtained cusing the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin certain the method of the detection of streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against corresponding a therapeutic agent which is effective against corresponding and include Abiotrophia adiacens, Bordetella sp., corresponding sp., Enterobacteriaceae group, Escherichia coli, corresults than substrate specificity tests as results can be determined in corresponding sp., also achieved. Abiotol to AbH002304 crepresent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-APR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO200123604-A2

                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                          CC related microorganisms e.g. algae, archaea, bacteria, fungi and comparasites, for universal detection and for specific and ubiquitous contextion and identification of an algal, archaeal, bacterial, fungal and comparasites, genus, family and group. A nucleic acid (I) obtained cc parasitical species, genus, family and group. A nucleic acid (I) obtained cc using the method of the invention can be used for the universal detection comparasity of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the detection of cc at least one antimicrobial agent resistance gene or at least one toxin comparation of streptcoccus pneumoniae. (I) can be compared to design a therapeutic agent which is effective against cc used to design a therapeutic agent which is effective against cc which can be detected include Abiotrophia adiacens, Bordetella sp., cc Corynebacteriam sp., Enterobacteriaceae group, Escherichia coli controcae and Staphylococcus sp. Using DNA based tests provides faster cresults than substrate specificity tests as results can be determined in comparate accuracy is also achieved. AAH00101 to AAH002304 crepresent nucleotide sequences and primers/probes which are given in the cc exemplification of the present invention
                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                        Query Match

The method comprise applifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid sequences are used to generate universal probes which can be used to identify and detect the presence of algabacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bergeron MG, BULL

                                                                                                                                                                                                                                                                                                                                                              related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (1) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antinicrobial agent resistance gene or at least one toxin gene. hexh nucleic acids are used for the specific and ubiquitous detection and for identification of for the specific and ubiquitous detection and for identification of the specific and ubiquitous used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia addacens, Bordetella sp.,
                                                                                                                                                                                                                                      Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptcocccus sp., Neisseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  species with a combination of defined primer pairs. The method can used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Species specific; genus specific; family specific; probe; detection; identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; disagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-245006/25.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   28-SEP-1999; 99CA-02283458.

cc related microorganisms e.g. algae, archaea, bacteria, fungi and cc parasites, for universal detection and for specific and ubiquitous cd detection and identification of an algal, archaeal bacterial, fungal and cc detection and identification of an algal, archaeal bacterial, fungal and cc garasitteal species, genus, family and group. A nucleic acid (I) obtained cc using the method of the invention can be used for the universal detection cc of any bacterium, fungus or parasite in a sample and for the detection of cc at least one antimicrobial agent resistance gene or at least one toxin cc gene. hexA nucleic acids are used for the specific and ubiquitous cc detection and for identification of Streptococcus pneumoniae. (I) can be cc used to design a therapeutic agent which is effective against cc microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., cc which can be detected include Abiotrophia adiacens, Bordetella sp., cc which can be detected include Abiotrophia adiacens, Bordetella sp., cc which can be detected include Abiotrophia Bordetella sp., Neisseria cc mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria cc gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster cresults than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 crepresent nucleotide sequences and primers/probes which are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinate; resistance; catalytic subunit of proton-translation among resistance;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid sequences are used to generate universal probes and which can be used to identify and detect the presence of algal, a bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24-JUL-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAH01065
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid sequences are used to generate universal probes which can be used to identify and detect the presence of algobacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                05-APR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Enterococcus flavescens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  primer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                 The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacterial, fungal and general detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal and CC parasitical species, genus, family and group. A nucleic acid (I) obtained CC using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin CC detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against which to effective against which can be detected include Abiotrophia addacens, Bordetella sp., CC Corynebacteriaceae family. Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. . Using DNA based tests provides faster cesults than substrate specificity tests as results can be determined in continue and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Species specific; genus specific; family specific; probe; detection; identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor To; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-SEP-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-SEP-2000; 2000WO-CA001150

                          The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic coacids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more created microorganisms e.g. algae, archaea, bacteria, fungi and corparasites, for universal detection and for specific and ubiquitous concentrated and concentrated and concentrated and concentrated and concentrated concentrated and concentrated an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

Mycobacteriaceae

RESULT 14 ADO47257 밁 8 ន្តន្តន្តន្តន្ត្ resistant enterococci (VRE) in a sample, comprising performing a cycling crep by amplifying a sample with pair of vanA or vanB primers and chybridising the sample with pair of vanA or vanB primers and comprising the sample with pair of vanA or vanB primes, labelled with chybridising the sample with pair of vanA or vanB primes, detecting donor and acceptor fluorescent group, respectively, detecting creinficture, the presence of the probes of the presence of the probes of the presence or absence of the presence or absence of the presence or absence of the method of the presence or absence of the method of the presence of the presence or absence of the method of the presence of the presence of the presence of the presence of the method of the presence of the Matches gonorrhoeae and Staphylococcus sp. . Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention Sequence 1768 BP; 537 A; 336 C; 437 G; 458 T; 0 U; 0 Other; Disclosure; SEQ ID NO 10; 23pp; English. Query Match Best Local S Matches 27 RESULT 15 ADY59927 밁 S complement or portion, where the oligonucleotide hybridizes under stringent hybridization conditions to vanA or vanB DNA; and (2) a kit comprising one or more oligonucleotide(s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceucical products or other products requiring microbiological control. The present sequence represents an Enterococcus faecium vanA nucleotide sequence from the present invention. 02-JUN-2005 ADY59927 oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or probe or primer, and detecting or determining the presence or amount hybrid formation or amplified nucleic acid. Method for the detection of bacterial species using probes and primers allows detection and quantification of antibiotic resistant bacteria in patients, the environment and food.

94; Page 145-147; 216pp; English.

The sequences given in AAT28560-76 represent fragments derived from CC bacterial antibiotic resistance genes which were used as probes in the CC method of the invention for the detection of bacterial species in a CC sample. The method of the invention comprises using probes and/or CC amplification primers which are specific, ubiquitous and sensitive for CC determining the presence and/or amount of nucleic acids from selected bacterial species in any sample, where the bacterial nucleic acid CC comprises a selected target region hybridisable with the probes or CC primers and detecting the presence and/or amount of hybridised primers or CC primers and detecting the presence and/or amount of hybridised primers or CC maplification products as and indication of the presence and/or amount of the bacterial species. This method may be used to detect commonly CC encountered bacterial pathogens, e.g. Escherichia coli, Klebsiella CC pneumoniae, Pseudomonas aeruginosa, Proteus mirabilis, Streptococcus groundiae, Staphylococcus aureus, Staphylococcus epidermidis, CC Enterococcus faecalis, Staphylococcus saprophyticus, Streptococcus grounding species are associated with approx. 90% of urinary tract CC including septicaemia, menningitis, pneumonia, intra-abdominal infections, CC skin infections and other severe respiratory tract infections. The method contral also be used to evaluate a bacterial resistance to beta-lactam may also be used to antibiotics

RESULT 17
                                 The invention relates to detecting target bacterial species suspected to be present in a sample, comprising contacting nucleic acids of target CC bacterial by fragment (ABA7685-ABA77861) specific for the target bacterial by fragment (ABA7685-ABA778661) specific for the target CC bacterial by fragment (ABA7685-ABA76861) specific for the target bacterial species but ubiquitous for different strains, amplifying the concleic acid and detecting the presence or amount of an amplified CC sequence as an indication of the presence or amount of the target bacterial species. The invention includes primers and probes (ABA76862-ABA76984) against the target bacterial species amount of the target bacterial species. S. espidally E. Coli, CC k.pneumoniae, P. aeruginosa, P. mirabilis, S. pneumoniae, S. aureus, CC s. epidermidis, E. faecalis, S. saprophyricus, S. pyogenes, H. influenzae, CC k.pneumoniae, P. aeruginosa, P. mirabilis, S. pneumoniae, S. aureus, CC A., suspected to be present in a sample which is obtained from human compations of the present of cod, and which consists of one or more patients, animals, environment or food, and which consists of one or more bacterial genes encoding resistance to antibiotics such as bla(tem), CC the bacterial genes encoding resistance to antibiotics such as bla(tem), CC vanX, satA, aacA-aphD, vat, vga, msrA, sul and/or int (ABA76985-ABA77001) care also useful to identify commonly encountered and clinically important cresistance genes. The invention provides a rapid method of bacterial colonitics invention provides a rapid method of bacterial colonitics invention provides a rapid method of bacterial colonitics in the identification of pathogens in the clinical laboratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

(INFE-) INFECTIO DIAGNOSTIC (IDI) INC.

Picard FJ, Bergeron MG, Roy Boissinot M, Huletsky A, Menard C, Ouellette M;

Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample.

Disclosure; Page 1035-1036; 1580pp; English.

of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexh nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 nucleic acids of tuf, fus, atpb and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention invention describes a method for generating a repertory of fus, atpD and/or recA genes from which probes

                                                                                                                     This sequence contains the genes vanH, vanA, vanX, vanR and vanS. The proteins encoded by the latter two genes (i.e. proteins VanR and VanS) have a regulatory function and control expression of the other three ("protective") proteins. See also AAQ25179-Q25182. The invention relates to methods of reducing vancomycin resistance in a CC vancomycin-resistant organism. One method involves introducing a CC vancomycin resistant organism. One method involves introducing a CC vancomycin resistance gene antisense mucleic acid into the organism; CC antisense oligonucleotides complementary to AAF76023-AAF76031 are graticularly preferred for this purpose. The second method involves CC providing additional vanH promoter sequences which are not operatively CC coupled to a vancomycin resistance gene, so that the phosphorylated vank gene product (which induces vanH promoter activity) is competitively CC sequestered. Both methods are able to restore antibiotic susceptibility in glycopeptide resistant enterococci. The methods of the invention are cuseful for reducing vancomycin resistance in a vancomycin resistant corganism, particularly Enterococcus faecium and Enterococcus ge. and Streptococcus sp., to which Enterococcus faecium and Enterococcus ge. and CC streptococcus sp., to which Enterococcus faecium and Enterococcus The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               humans; and in primary or adjuvant therapy for vancomycin-resistant enterococcal infections. The gene based strategy targets key vancomycin resistance determinants and results in restoration of vancomycin susceptibility in previously glycopeptide- resistant enterococci. The present sequence represents the Enterococcus faecium VanA gene cluster
                                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or a for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-MAR-2002; 2002WO-US009107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO200277183-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  significant pathogens, and may be vancomycin-resistant enterococci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antisense molecules are useful in the treatment of infection and colonisation by vancomycin resistant enterococci and other clinically significant pathogens, and may be used for the ex vivo eradication of
                            The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the
                                                                                                                                                                                                                                                                             Claim 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21-MAR-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-JUN-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to detecting the presence or absence of vancomycin-
CC resistant enterococci (VRE) in a sample, comprising performing a cycling
CC step by amplifying a sample with pair of vanA or vanB primers and
CC hybridising the sample with a pair of vanA or vanB probes, labelled with
CC donor and acceptor fluorescent group, respectively, detecting
CC fluorescence resonance energy transfer (FRET), where the presence of FRET
CC comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes
CC and a donor fluorescent group and a corresponding fluorescent group. The
CC method is useful for detecting the presence of vanA or vanB probes
CC enterococci in a biological sample, e.g. stool samples, anal or
CC replaces standard culture methods and reduces the cost. The method
CC replaces rapid vancomycin resistant enterococcus real time PCR assay
CC which is useful for beginning the antimicrobial therapy immediately to
CC treat hospital acquired infection. The present sequence is an
CC enterococcal vanA comprised resistance cans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                resistant enterococci (VRE) in a sample, comprising performing a cycling step by amplifying a sample with pair of vanA or vanB primers and hybridising the sample with a pair of vanA or vanB probes, labelled with donor and acceptor fluorescent group, respectively, detecting fluorescence resonance energy transfer (FRET), where the presence of FRET indicates presence of VRE. Also included is an article of manufacture, comprising a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       method is useful for detecting the presence or absence of vancomycin-
resistant enterococci in a biological sample, e.g. stool samples, anal
perirectal swabs, blood and body fluids from an individual. The method
replaces standard culture methods and reduces the cost. The method
provides rapid vancomycin resistant enterococcus real time PCR assay
which is useful for beginning the antimicrobial therapy immediately to
treat hospital acquired infection. The present sequence is an

Detecting presence or absence of vancomycin-resistant enterococci in biological sample from individual comprises using real time polymerase

WPI; 2004-268785/25 Cockerill FR,

Sloan LM

The invention relates to detecting the presence or absence of vancomycin-resistant enterococci (VRE) in a sample, comprising performing a cycling step by amplifying a sample with pair of vanh or vanB primers and

hybridising the sample with a pair of vanA or vanB probes, labelled with donor and acceptor fluorescent group, respectively, detecting fluorescence resonance energy transfer (FRET), where the presence of FRET

indicates presence of VRE. Also included is an article of manufacture, comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancewcin-resistant enterococci in a biological sample, e.g. stool samples, anal or perirectal swabs, blood and body fluids from an individual. The method replaces standard culture methods and reduces the cost. The method provides rapid vancomycin resistant enterococcus real time PCR assay which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an

The invention relates to detecting the presence or absence of vancomycin-resistant enterococci (VRE) in a sample, comprising performing a cycling step by amplifying a sample with pair of vanA or vanB primers and hybridising the sample with a pair of vanA or vanB probes, labelled with donor and acceptor fluorescent group, respectively, detecting fluorescence resonance energy transfer (FRET), where the presence of FRET indicates presence of VRE. Also included is an article of manufacture, comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancomycin-resistant enterococci in a biological sample, e.g. stool samples, anal or

Also included is an article of manufacture, comprising a pair of vanh or vanh primers, a pair of vanh or vanh probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancomyclinresistant enterococi in a biological sample, e.g. stool samples, anal or perirectal swabs, blood and body fluids from an individual. The method replaces standard culture methods and reduces the cost. The method provides rapid vancomyclin resistant enterococcus real time PDR assay which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vancomycin resistant enterococcus; vancomycin resistance gene; vanB; gene; ds; hospital acquired infection; VRE_i fluorescence resonance energy transfer; FRET.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detecting presence or absence of vancomycin-resistant enterococci in biological sample from individual comprises using real time polymerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         E. faecalis vancomycin resistance gene, vanB EFU72704.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 556 BP; 134 A; 161 C; 116 G; 145 T; 0 U;

     cc resistant enterococci (VRE) in a sample, comprising performing a cycling cc step by amplifying a sample with pair of vanA or vanB primers and cc hybridising the sample with a pair of vanA or vanB primers and cc donor and acceptor fluorescent group, respectively, detecting cc fluorescence resonance energy transfer (FRET), where the presence of FRET cc indicates presence of VRE. Also included is an article of manufacture, cc comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes cc and a donor fluorescent group and a corresponding fluorescent group. The cc method is useful for detecting the presence or absence of vanComycin-cc resistant enterococci in a biological sample, e.g. stool samples, anal or perisects standard culture methods and reduces the cost. The method cc provides rapid vancomycin resistant enterococcus real time PCR assay cc which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an enterococcal vanB, vancomycin resistance gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      perirectal swabs, blood and body fluids from an individual. The methor replaces standard culture methods and reduces the cost. The method provides rapid vancomycin resistant enterococcus real time PCR assay which is useful for beginning the antimicrobial therapy immediately threat hospital acquired infection. The present sequence is an treat hospital acquired infection.

                                                                                          comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancomycin-resistant enterococci in a biological sample, e.g. stool samples, anal or perirectal swabs, blood and body fluids from an individual. The method replaces standard culture methods and reduces the cost. The method provides rapid vancomycin resistant enterococcus real time PCR assay which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an enterococcal vanB, vancomycin resistance gene.
                                                                                                                                                                                                                                                    resistant enterococci (VRB) in a sample, comprising performing a cycling step by amplifying a sample with pair of vanA or vanB primers and hybridising the sample with a pair of vanA or vanB probes, labelled with donor and acceptor fluorescent group, respectively, detecting fluorescence resonance energy transfer (FRET), where the presence of FRET indicates presence of VRE. Also included is an article of manufacture,
                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; SEQ ID NO 16; 23pp; English.

                                                                                                                                                                                                                                                                         The protein encoded by the vanB gene is implicated in resistance of Gram-
positive bacteria to glycopeptides, particularly to vancomycin. This
resistance is inducible by Vancomycin but not by teicoplanin. Sequence
AAQ69230 is a claimed internal fragment of the vanB gene. (Updated on 25-
MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or 898-917 of the vanA gene, or its complement or portion, or an conjugation of the vanA gene, or its complement or portion, or an conjugation of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under the comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under the comprising one or more oligonucleotide (s) specific for a vanA gene and/or comprising one or more oligonucleotide (s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned cabove. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus).

They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products requiring microbiological control. The present sequence represents an extension of the present sequence from the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         acids of determined algal, accuracy, species with a combination of defined primer pairs. The method can species with a combination of defined primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing immage algae, archaea, bacteria, fungi and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 1027; 1580pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probe or prime, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or 898-917 of the vanA gene, or its complement or portion, or an oligonucleotide comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under stringent hybridization conditions to vanA or vanB MA, and (2) a kit comprising one or more oligonucleotide(s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus) antibiotic resistance genes (e.g. vancomycin-resistant enterococcus) control of food, water, pharmaceutical products or other products an requiring microbiological control. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

Example 1; SEQ ID NO 17; 33pp; English.

CC probe or primer, and detecting or determining the presence or amount of chybrid formation or amplified nucleic acid. Also described: (1) an CC oligonucleotide composition comprising a first oligonucleotide comprising cc sequences substantially corresponding to nucleotides 870-896, 851-868 or CC 898-917 of the vanA gene, or its complement or portion, or an CC oligonucleotide comprising sequences substantially corresponding to complement or portion, or an CC oligonucleotide 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under CC comprising one or more oligonucleotide hybridizes under CC comprising one or more oligonucleotide (s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned CC above. The method and kit are useful for detecting and/or amplifying CC genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying CC genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying CC genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying CC control of food, water, pharmaceutical products or other products or control of food, water, pharmaceutical products or other products are products.

CC requiring microbiological control. The present sequence represents a The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonuclectide requiring microbiological control. The present sequence represents a consensus vanB nucleotide sequence from the present invention.

Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for e.g. identifying vancomycin-resistant enterococcus, comprises using vanA-and/or vanB-specific oligonucleotide probes or primers.

SEQ ID NO 13; 33pp; English.

oligonucleotide comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under stringent hybridization conditions to vanA or vanB DNA; and (2) a kit comprising one or more oligonucleotide(s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products a requiring microbiological control. The present sequence represents an enterococcus faecium vanB nucleotide sequence from the present invention. The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonuclectide oligonucleotide composition comprising a first oligonucleotide comprising 898-917 of the vanA gene, or its complement or portion, or an sequences substantially corresponding to nucleotides 870-896, 851-868 probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for e.g. identifying vancomycin-resistant enterococcus, comprises using vanA-and/or vanB-specific oligonucleotide probes or primers.

Example 1; SEQ ID NO 10; 33pp; English

The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide

comprising one or more oligonucleotide(s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products an requiring microbiological control. The present sequence represents an oligonucleotide comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under stringent hybridization conditions to vanA or vanB DNA; and (2) a kit probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an oligonucleotide composition comprising a first oligonucleotide composition comprising to nucleotides 870-896, 851-868 or sequences substantially corresponding to nucleotides 870-896, 851-868 or Enterococcus faecium vanB nucleotide sequence from the present sequences substantially corresponding to nucleotides 870-896, 898-917 of the vanA gene, or its complement or portion, or an e comprising 851-868 or
